Sailing Positions

Righting the Boat After Capsize

**K****Assembly Tips**

- Apply a small amount of liquid soap inside the aluminum track to help slide the tube on with greater ease.
- Partially inflate the tube (1/4 Full) to help slide the tube on.

**Storage and Maintenance**

- Avoid storing the tube in sunlight.
- Avoid contact with sharp or abrasive objects.
- Use a boat cover (Available from Walker Bay).
- For longterm or winter storage you may remove the tube and rinse it with soapy fresh water (Do not use harsh or abrasive cleaners).
- Store the tube in a safe, clean and dry place.
- If you store the boat with the tube attached you must release some air pressure as the air inside the tube expands and contracts with temperature variation.
- Using the valve wrench located in the orange fabric repair kit tighten each valve until it is snug. **DO NOT OVERTIGHTEN.** This should be done about 4 times per year.

**Repairs**

- Minor punctures and leaks can be repaired with the repair kit included with your boat.
- Follow the directions provided with the repair kit.
- For significant repairs contact your dealer or Walker Bay Boats' customer service.

Use liquid soap and water on the track runner on the tube to help slide the tube on with greater ease.

Use care when feeding tube runner into track and guide. **DO NOT FORCE TUBE INTO TRACK**

Using the wrench provided in the repair kit, hand tighten valve. **DO NOT OVERTIGHTEN**
